Canadian Pesticide Mixes & Kits

For Regulations set by the Government of Canada

Chemical pesticides have become an integral part of the agricultural toolbox, offering protection to crops from destructive pests. However, an unfortunate side effect of their uses is the potential leaching of these, oftentimes, harmful chemicals into the environment leading to their eventual presence in the human food chain. As a result, pesticide residue analysis has become a critical testing process for many different types of laboratories.

For your convenience, we have designed a cannabis pesticide kit which contains the 95 compounds that are required to be tested based on regulations set by the Government of Canada. This requirement for mandatory testing for the presence of unauthorized pesticides will help ensure that Canadians can continue to have confidence in obtaining safe, quality-controlled medical cannabis from licensed producers.

Terpenes in a sample of Cannabis helps to identify the strain and has an effect on the medical efficacy. SPEX CertiPrep offers single component standards for common terpenes in Cannabis residues to make strain identification easier for the analyst.
